Canadian Data Report of Fisheries and Aquatic Sciences

Data reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of data reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries and aquatic sciences.

Data reports are not intended for general distribution and the contents must not be referred to in other publications without prior written authorization from the issuing establishment. The correct citation appears above the abstract of each report. Data reports are abstracted in *Aquatic Sciences and Fisheries Abstracts* and indexed in the Department's annual index to scientific and technical publications.

Numbers 1-25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26-160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was introduced with the publication of report number 161.

Data reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page. Out-of-stock reports will be supplied for a fee by commercial agents.

Rapport statistique canadien des sciences halieutiques et aquatiques

Les rapports statistiques servent à classer et à archiver les compilations de données pour lesquelles il y a peu ou point d'analyse. Ces compilations auront d'ordinaire été préparées à l'appui d'autres publications ou rapports. Les sujets des rapports statistiques reflètent la vaste gamme des intérêts et des politiques du ministère des Pêches et des Océans, c'est-à-dire les sciences halieutiques et aquatiques.

Les rapports statistiques ne sont pas destinés à une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au-dessus du résumé de chaque rapport. Les rapports statistiques sont résumés dans la revue *Résumés des sciences aquatiques et halieutiques*, et ils sont classés dans l'index annuel des publications scientifiques et techniques du Ministère.

Les numéros 1 à 25 de cette série ont été publiés à titre de relevés statistiques, Services des pêches et de la mer. Les numéros 26 à 160 ont été publiés à titre de rapports statistiques du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom actuel de la série a été établi lors de la parution du numéro 161.

Les rapports statistiques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre. Les rapports épuisés seront fournis contre rétribution par des agents commerciaux.

ABSTRACT

Yaremchuk, G.C.B., M.M. Roberge, D.K. McGowan, G.W. Carder, B. Wong, and C.J. Read. 1989. Commercial harvests of major fish species from the Northwest Territories, 1945 to 1987. Can. Data Rep. Fish. Aquat. Sci. 751: iv + 129 p.

Commercial harvest statistics from the Northwest Territories for eight freshwater and anadromous species; lake trout (Salvelinus namaycush), lake whitefish (Coregonus clupeaformis), broad whitefish (Coregonus nasus), inconnu (Stenodus leucichthys), cisco (Coregonus sp.), yellow walleye (Stizostedion vitreum), northern pike (Esox lucius), and Arctic charr (Salvelinus alpinus), were compiled from all known sources. Tables summarizing annual harvests by species for the Northwest Territories, for each region of Schedule V of the Northwest Territories Fishery Regulations, for each community area, and for each water body within community areas are presented.

Key words: biological production; catch statistics; commercial fishing; exploitation.

RÉSUMÉ

Yaremchuk, G.C.B., M.M. Roberge, D.K. McGowan, G.W. Carder, B. Wong, and C.J. Read. 1989. Commercial harvests of major fish species from the Northwest Territories, 1945 to 1987. Can. Data Rep. Fish. Aquat. Sci. 751: iv + 129 p.

Des statistiques sur la récolte commerciale de huit espèces d'eaux douces et d'espèces anadromes dans les Territoires du Nord-Ouest ont été recueillies dans toutes les sources de données connues. Les espèces en question sont le touladi (Salvelinus namaycush), le grand corégone (Coregonus clupeaformis), le corégone tschir (Coregonus nasus), l'inconnu (Stenodus leucichthys), le cisco (Coregonus sp.), le doré (Stizostedion vitreum), le grand brochet (Esox lucius) et l'omble arctique (Salvelinus alpinus). On présente des tableaux résumant les récoltes annuelles de chacune des espèces dans les Territoires du Nord-Ouest, dans chacune des régions définies dans la partie 5 des règlements du Territoires du Nord-Ouest sur les pêcheries, dans chacune des communautés et dans chacune des nappes d'eau sur le territoire des communautés.

Mots-clés: production biologique; statistiques sur les prises; pêche commerciale; exploitation.

INTRODUCTION

The fisheries of the Northwest Territories (NWT) can be divided into three types as defined in the Northwest Territories Fishery Regulations:

- 1) Commercial - catching of fish for sale or barter;
- 2) Domestic - catching of fish for personal use (including consumption by domestic animals) but not for sale or barter;
- 3) Sport - catching of fish for pleasure but not for sale or barter. This can be in the category of either:
 - i) lodge-based - fishing by customers of sport fishing lodges, which can be considered to be another form of commercial fishing;
 - ii) recreational - fishing by residents and non-residents of the NWT, excluding fishing at sport lodges.

Commercial fishing in the NWT commenced with the opening of the Great Slave Lake fishery for lake whitefish and lake trout in 1945 (Rawson 1947). This fishery, now almost exclusively for whitefish (Low and Read 1987), is still the largest NWT commercial fishery. Other relatively important commercial fisheries include the walleye fisheries in Kakisa (Roberge et al. 1986) and Tathlina (Roberge et al. 1988) lakes and the Arctic charr fisheries at Cambridge Bay and Rankin Inlet (Carder 1981, 1983, and 1988; Carder and Peet 1983; Kristofferson et al. 1982). However, the Rankin Inlet fishery has declined since the closing of the local cannery in 1976 (Carder and Peet 1983). Many smaller commercial fisheries exist throughout the NWT, particularly along the Arctic coast for anadromous Arctic charr. However these small fisheries are often sporadic; lakes and rivers are opened to commercial fishing only every few years when a request is received.

All commercial fishing water bodies are listed in Schedule V of the Northwest Territories Fishery Regulations by geographic region (Fig. 1), as well as by quota species, mesh size, closed season, and annual quota. Seasons are opened by issuance of a Variation Notice to Schedule V.

In the past, several agencies including the RCMP, Government of the Northwest Territories (GNWT) Department of Economic Development, and Department of Fisheries and Oceans (DFO) have collected commercial fishing harvest statistics for the NWT. However, comprehensive records are not available for most years. Today sales slips and fishermen themselves provide the bulk of information on which harvest estimates are based. This information, expressed as kilograms round weight (since 1981) and including an estimate of cullage, is then forwarded to DFO

from the communities or GNWT Department of Renewable Resources.

Statistics presented in this report were collected from records held in DFO, GNWT Departments of Economic Development and Tourism and Renewable Resources, and the Freshwater Fish Marketing Corporation. Accuracy and comprehensiveness of the statistics varies, and generally decreases as time passes. Some harvests have in fact gone unreported in recent years. To overcome this deficiency in the reporting procedure, DFO is in the process of establishing a computerized commercial fisheries statistics reporting system to provide accurate annual production reports.

Commercial fishing also takes place in waterbodies not listed in Schedule V under the auspices of a test fishery program (Kristofferson and McGowan 1981). Under this program a Test Fishery Licence is issued with provisional quotas, species, mesh size, and season being set. Fishermen fish these waterbodies under the supervision of GNWT Renewable Resource Officers or DFO Fishery Officers and provide catch and effort data and, when required, biological samples. The rationale behind the test fishery approach is to gather baseline data including a biological sample during the first year or two of fishing to assess the fish stock at the onset of fishing. Fishing should continue for the next 3-5 years to harvest the provisional quota, with accurate harvest and effort statistics being recorded. At the end of this time a final biological sample is collected and compared with the initial sample. If there appears to be no major changes in population parameters or effort, it is assumed that the harvest level is sustainable and the fishery is then submitted for inclusion in Schedule V as a commercial fishery.

This report presents summaries of the annual commercial fish harvests for eight major commercial fish species for the NWT as a whole (Table 1) (excluding harvest from test fisheries), by each region listed in Schedule V (Fig. 1 and Tables 2-7), and by individual community (Fig. 2 and Table 8). The eight major commercial freshwater and anadromous species are lake trout (Salvelinus namaycush), lake whitefish (Coregonus clupeaformis), broad whitefish (Coregonus nasus), inconnu (Stenodus leucichthys), cisco (Coregonus sp.), yellow walleye (Stizostedion vitreum), northern pike (Esox lucius), and Arctic charr (Salvelinus alpinus).

METHODS AND MATERIALS

A series of computer files were established on a VAX computer system located at DFO, Freshwater Institute, Winnipeg, MB. The files include:

- a waterbody source file which relates a two-letter (corresponding to a community (Fig. 2)) three digit alpha-numeric waterbody code to a specific place name and set of coordinates;

- a licence file which contains information on commercial and test fishery quotas and seasons; and
- a harvest file which contains information on annual harvests by species.

The files were intermeshed and summary tables generated using the Statistical Analysis System (1985) package.

Historical records from DFO, GNWT Departments of Economic Development and Renewable Resources, and the Freshwater Fish Marketing Corporation were examined for fish harvest statistics. In cases of conflict between sources the highest value was accepted as the most accurate, unless there was reason to suspect its accuracy. The statistics presented represent the total annual harvest including an estimate of cullage, if possible. However most historical data do not include cullage estimates. Data expressed as dressed weight were converted to round weight using the following conversion factors (Low and Read 1987; Carder 1988):

Arctic charr (anadromous)	1.15
Lake whitefish	1.17
Lake trout	1.21
Inconnu	1.16
Yellow walleye	1.22
Northern pike	1.22

The conversion factor for Arctic charr does not include cullage. Since 1960 a conversion factor of 1.25 has been used for charr harvested from the Cambridge Bay fisheries to include cullage. No conversion factors are available for Arctic charr (landlocked), broad whitefish, and cisco sp. Data collected prior to 1981 and reported in pounds were converted to kilograms using a conversion factor of 0.454. Wherever possible harvests were attributed to specific waterbodies within an administrative area. However in some instances a water body was not specified thereby resulting in the harvest being reported for a general area only.

Commercial fishing seasons, as listed in Schedule V of the Northwest Territories Fishery Regulations can be open from April 1 of one calendar year (listed) to March 31 of the next calendar year. Commercial quotas and harvests are reported on this seasonal year basis for all water bodies, except Great Slave Lake, Tathlina Lake (prior to 1978), and Kakisa Lake. Quotas and harvests for these latter waterbodies are reported from November 1 of the previous calendar year to October 31 of the current (listed) calendar year. As well it is felt that prior to 1975 some harvest data were likely on a calendar year basis rather than on a seasonal year basis.

Past quotas for some inland lakes were set on a six-year cycle. The total six-year quota harvest was to be taken during the first two years of the cycle. The lake was then to remain closed for the following four years to allow the stock to recover. This program was designed for economic reasons to offset the high cost of fly freighting the commercial catch.

ACKNOWLEDGMENTS

The authors wish to thank all those who have been involved in the important task of collecting fish harvest statistics in the NWT; Ms. Ann Main, for compiling many of the historical statistics, Mr. Harry Zeller, for assisting in computer entry of the data, and Mr. R.W. Moshenko for reviewing an earlier draft. G. McKinnon reviewed the report and provided constructive criticism. Typing provided by K. DeCaigny, B. Hyman, and C. Catt.

¹

COM = commercial, TEST = test fishery, 6 YR = 6 year cycle.

²

NOT F = not fished

Blank = no information

0 = fished but no harvest taken

a - Harvest indicates Eskimo Point general area and Maguse River combined.
